## CLAIM AMENDMENTS

1. (Currently Amended) An expandable implantable valve prosthesis, comprising:

a support frame supporting one or more leaflets, each leaflet comprising a biomaterial, the support frame and the one or more leaflets together functional as a valve to restrict blood flow in a first direction when implanted in the vascular vessel: and

wherein the biomaterial is folded over the support frame and attached to itself thereby securing the one or more leaflets to the support frame such that the wall-engaging outer edge of each of the one or more leaflets comprises a folded edge of the biomaterial carried by at least a portion of the support frame thereinside; and

wherein, each of the one or more leaflets extend inward from the wall-engaging outer edge to form the valve.

Claims 2 and 3. (Withdrawn)

Claims 4-6. (Canceled)

7. (Currently Amended) An implantable valve prosthesis, comprising:
a support frame supporting one or more leaflets, each comprising
a biomaterial, the one or more leaflets including a body, an inner edge,
and an outer edge;

wherein the support frame and the one or more leaflets together functional as a valve to restrict blood flow in a first direction when implanted in the vascular vessel; and

wherein the outer edge of the biomaterial comprising the one or more leaflets is folded over the support frame with the outer edge or portion adjacent thereto being attached to the leaflet body by a non-suturing method that include at least one of the group consisting of

		Claim	11. (Withdrawn)	
		Claims	12 and 13. (Cancel	ed)
	1	14. (Ne	w) An expandable i	mplantable valve prosthesis, comprising:
	2		a plurality of leaflets	of a biomaterial that include a body portion
	3	and a	puter edge configure	ed to engage the walls of a vessel, the wall-
	4	engagi	ng outer edge fur	ther comprising a folded portion of the
	5	bioma	erial extending alor	ng the wall-engaging outer edge, the folded
	6	portio	being formed by	the attachment of biomaterial to itself by a
	7	series	of heat welds position	oned therealong.
	1 ·	15. (N	ew) The valve pros	thesis of claim 14, wherein the wall-engaging
	2	outer	edge further includ	es a support frame enclosed by the folded
	3	portio	of the biomaterial	wherein the support frame resiliently urges
	4	the ou	ter edge against the	walls of vessel.
	1	16. (N	ew) The valve prost	hesis of claim 14, wherein the biomaterial
	2	compr	ises a remodelable i	material.
	1	17. (N	ew) The valve pros	thesis of claim 14, wherein the remodelable
	2	materi	al comprises an sub	mucosa.
